

Traffic management check sheet – working close to public					
Name of person completing check sheet;					
Show;					
Date;					
Location being assessed;					
YOUR WORK ACTIVITIES					
Your activities may vary from minor maintenance works to large-scale engineering works. Works on the roadway will principally affect drivers, cyclists and pedestrians at crossing points. Works off the roadway will principally affect pedestrians. A detailed risk assessment should identify the work activities and the people who are exposed to the associated hazards. Where work activity is carried out close to members of the public, measures should be taken to protect them.					
HAZARDS AFFECTING YOU anything with the potential to cause harm			RISKS YOU ARE EXPOSED TO the chance you will be harmed by the hazard		
Members of the public may not be aware of the hazards associated with road works. They may not know how to react to road work situations and may not be driving appropriately for the conditions			Any interface with the public is high risk. In particular where construction operations or construction traffic is in the public domain or cuts across the public domain.		
YOUR CONTROLS					
Where your work is close to the public, you need to plan out in advance how you are going to control that interface. You must prepare a traffic management plan in line with guidance such as Chapter 8 of the Traffic Signs Manual taking into account the safety of the public and of your employees in implementing the plan and in undertaking the works. Determine who has right of way and what the appropriate speed limits are for the public passing through the works. You need to decide what level of protection is required to keep the public and your workers safe. If there is public access close to, or around, the works, you must put in place suitable and safe pedestrian routes so as to make sure that public safety is not put at risk. Specific consideration must be given to people with disabilities. Construction debris must be kept clear from public areas. Dust, muck, objects likely to fall, protruding puncture objects, trip hazards etc. must be removed. Where reinstatement is required, it must be completed without delay.					
Control type	Tick <input type="checkbox"/> to identify required control		Tick <input type="checkbox"/> when control is in place		
Liaise with Garda	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
